

Energy Efficiency Optimization Program (EEOP)

Announcing EEOP, Energy ETC’s solution for evaluating, monitoring, and controlling energy usage in commercial and industrial facilities

Per the California Long Term Energy Efficiency Strategic Plan.....

- **Commercial buildings** will be put on a path to zero net energy by 2030 for all new and a substantial proportion of existing buildings.

Three Interrelated Strategies will be employed to achieve this.....

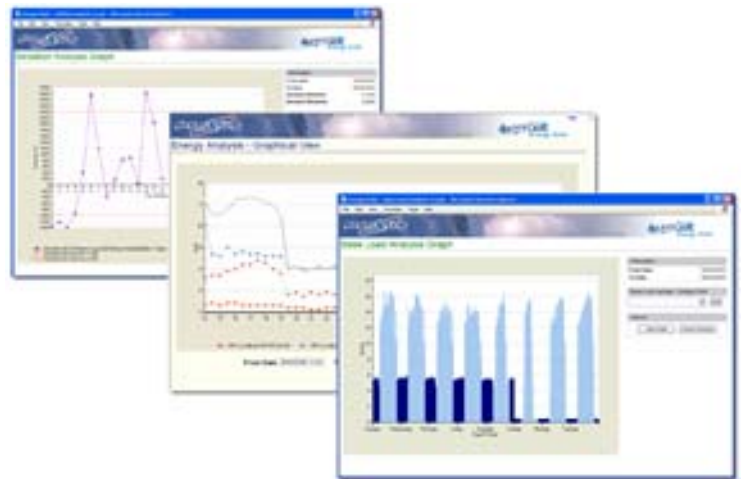

- **Codes and Standards:** Adopt aggressive and progressive minimum energy codes and standards for buildings and plug loads, effective code compliance and enforcement, and parallel, tiered voluntary energy efficiency standards.
- **Access to Information:** Align commercial building benchmarking, advanced metering infrastructure, energy and carbon labeling, and operations and maintenance practices to increase energy efficiency.
- **Financing:** Target financing and incentives to support meeting commercial sector goals.

Energy Costs will not go down! Rising energy and utility costs, new building and environmental regulations and the need to meet ever growing user demands are rapidly becoming the greatest challenges for today’s building management personnel.

EEOP is your solution! Be Prepared. Our team will meet with you and your staff to understand your corporate financial and environmental goals. We’ll then tailor a comprehensive plan and coherent implementation strategy to satisfy your vision without sacrificing tenant comfort or interrupting critical building operations.

Our comprehensive solution will include:

- Thorough energy audit and reporting
- Detailed implementation strategy/plan
- Incentives and rebates for your area
- Projected savings with ROI
- Integrated direct digital control system for HVAC, lighting, irrigation, and more
- **Solar SMART™** Solutions
- Customized software for web based monitoring and control
- Automated demand response
- Energy Star benchmarking and performance tracking
- Commissioning and continuous validation
