

Don't Just "Do" Solar, Do SOLAR . . . SMART!

Optimize Your Solar Savings

NEW SYSTEM: Integrated Solar Control

The cost of electricity will not go down. The ability to dynamically monitor the KW demand and KWH consumption of a building is becoming critical in controlling operating costs.

New advances in solar panel and inverter technology along with rebates and tax credits now make the implementation of **SOLAR...SMART**.

Building Operator's concerns regarding the reduction of a facilities carbon footprint also make solar more attractive.

A typical solar system will create savings but Energy ETC's implementation of its **SOLAR...SMART** technology can generate maximum savings from the solar system by dynamically optimizing demand usage.

Control Features to be implemented are:

- Complete Solar Solution utilizing **SOLAR...SMART** .
- Control and Monitor via a standard web browser.
- Trended information for system performance review.
